SCALE OF MILES

By the plan, adopted in surveying the Public Lands of the United States, the country is divided into townships, by lines 6 miles apart, running due East & West, called town lines, and others, 6 miles apart, running North and South, called range lines. Both of these systems of parallel spaces are numbered in regular order from 1 upwards, and the squares or townships thus formed, are known by a combination of both town and range numbers. Full townships of 36 square miles each, contain 36 square miles called sections, numbered from 1 to 36 thus: 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30 31 32 33 34 35 36. These sections are subdivided into quarters and into quarter sections. A full section, contains 360 acres. To locate any described piece of land on this map, first find the township, numbered in figures on the Principal Meridian, or other North & South line. Second, the range, numbered on a correction or other East & West line, noticing whether the description calls for E. or W. of Principal Meridian. Then, prolonging the two the point of intersection is in the township sought.
